**PRODUCT DESCRIPTION:** Dectomax injectable solution is a 1% injectable solution of doramectin (Streptomyces avermitilis). Doramectin is a highly active, broad-spectrum anthelmintic and anti-insect agent for the treatment and control of a wide range of internal and external parasites that impair the health and productivity of cattle and swine. One dose of Dectomax injectable solution effectively treats and controls a wide range of roundworm and arthropod parasitism.

**Indications:** For treatment and control of gastrointestinal roundworms, eyeworms, grubs, sucking lice, and mange mites. Dectomax injectable solution is a product of Zoetis Inc., a global animal health company and is distributed in the USA by Zoetis Inc., New York, NY 10016. Zoetis Inc. is a trademark of Zoetis Inc. and may be registered or pending in other countries.

**Recommended Dose:** For adult cattle or an 18 gauge needle 1-1/2" needle for sows and boars. To inject solution by SC or IM route. Injections should be administered into muscle mass as directed. Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasitism. Consult your veterinarian concerning the proper time for treatment and control of mange and sucking lice in cattle. This product is approved for the treatment and control of internal parasites, mange mites, and external parasites such as biting lice, without danger of grub-related reactions. A planned winter for internal parasites, mange mites, or sucking lice in swine may be re-treated with Dectomax during the spring season to prevent recrudescence. Do not contaminate water sources and do not contaminate feed or food. Do not contaminate water sources before, during, or after each injection with the material safety data sheet (MSDS) contains information for proper disposal. The magnitude and duration of adverse reactions may be increased in the presence of concurrent disease.

**WARNINGS:** Not for human use. Keep out of reach of children. The material safety data sheet (MSDS) contains information for proper disposal. The magnitude and duration of adverse reactions may be increased in the presence of concurrent disease.

**Residue Warnings:** Do not slaughter for human consumption within 24 days of treatment. Do not slaughter for human consumption within 35 days of treatment. Not for human use. Keep out of reach of children. Consult your veterinarian concerning the proper time for treatment and control of mange and sucking lice in cattle. This product is approved for the treatment and control of internal parasites, mange mites, and external parasites such as biting lice, without danger of grub-related reactions. **HOW SUPPLIED:** Store Below 30°C (86°F) in a dark, well-closed container. Do not freeze. Concentrate is a sterile, colorless to pale yellow, 1% injectable solution of doramectin (Streptomyces avermitilis). Each mL contains 10 mg of doramectin as the free base. Dectomax injectable solution is a product of Zoetis Inc., a global animal health company and is distributed in the USA by Zoetis Inc., New York, NY 10016. Zoetis Inc. is a trademark of Zoetis Inc. and may be registered or pending in other countries.

**Product Name:** Dectomax Injectable Solution for Cattle and Swine (1% doramectin)

**Indications:**
- Effective treatment and control of gastrointestinal roundworms, lungworms, eyeworms, grubs, sucking lice, and mange mites.
- Assists in the diagnosis, treatment, and control of parasitism.

**Dosage and Administration:**
- Administer Dectomax injectable solution by intramuscular (IM) injection at the rate of 1 mL/75 lb of body weight.
- For IM injection in swine and cattle.

**Environmental Considerations:**
- Deterioration of water and forage can result in the transmission of parasites to humans.
- Do not contaminate water sources or other aquatic systems andหลวง part of food or feedstuffs.

**Safety Precautions:**
- In case of accidental ingestion, wash hands and seek medical attention.

**Storage:**
- Store below 30°C (86°F) and out of reach of children.

**Important Notes:**
- For most effective results, cattle should be treated as part of a parasite control program.
- Treat a minimum of 2 times per year.
- Treat 7–14 days prior to farrowing to minimize reinfestation from exposure to untreated animals or feedlots to enter streams or ponds. Do not contaminate water sources with this drug or its by-products.

**References:**
- For additional information, consult the product label for cattle and swine.
- For human use, consult the product label for cattle and swine.

**Dectomax Injectable Solution**

**Description**: Dectomax injectable solution contains doramectin, a highly active, broad-spectrum parasiticide for parenteral administration to cattle and swine. It contains doramectin, a highly active, broad-spectrum parasiticide for parenteral administration to cattle and swine.

**Route of Administration**: Dectomax should be given by IM injection at the rate of 1 mL/75 lb of body weight. In swine, Dectomax is formulated to deliver the recommended dosage (200 mcg/kg containing 1% w/v of doramectin (10 mg/mL). In cattle, Dectomax is available in 100-mL, 200-mL, and 500-mL vials. It is formulated to deliver the recommended dosage (150 mcg/kg of doramectin as the palmitate salt, 200 mcg/kg as the propionate salt, or 225 mcg/kg as the succinate salt) for cattle and (200 mcg/kg as the propionate salt) for swine.

**Dosing**:

- **Cattle**: For SC administration: Do not exceed 1 mL per 75 lb of body weight. For IM administration, use 1 mL per 100 lb of body weight. For SC administration in cattle only.
- **Swine**: For SC administration: Do not exceed 0.02 mL per lb of body weight. For IM administration, use 0.03 mL per lb of body weight.

**Precautions**:

- **Cattle**: Do not administer Dectomax to cattle for at least 28 days prior to slaughter for human consumption.
- **Swine**: Do not administer Dectomax to swine for at least 14 days prior to slaughter for human consumption.

**Environmental Considerations**: Dispose of the product container and any unused portion according to local regulations. Do not contaminate water, food, crops, or feed by storage or disposal.

**Additional Information**:

- **Gastrointestinal Roundworms**: Oesophagostomum ostertagi, Cooperia oncophora, Cooperia punctata, Cooperia surnabada, Trichostrongylus axei, Trichostrongylus colubriformis, and Haemonchus contortus.
- **Internal Parasites**: Ostertagia ostertagi, Cooperia oncophora, Cystodirus dubius, Cooperia punctata, Trichostrongylus axei, Trichostrongylus colubriformis, and Haemonchus contortus.
- **Mange Mites**: Sarcoptes scabiei var. suis, Ommatius quadrispinulatum, and Solenopotes capillatus.
- **Lice**: Haematopinus eurysternus, Haematopinus suis, Pneumonyssus tenuis, and Linognathus setulosus.

**For SC injection in cattle only.** For IM injection in cattle and swine. This product is approved for the treatment and control of parasitism. Consult your veterinarian concerning the proper time for treatment. Administer Dectomax injectable solution at the rate of 1 mL/75 lb of body weight. Each mL contains 10 mg of dorsane LC (doramectin). It is formulated to deliver the recommended dosage of 200 mcg doramectin per kg of body weight. In swine, Dectomax is formulated to deliver the recommended dosage (200 mcg/kg containing 1% w/v of doramectin (10 mg/mL). In cattle, Dectomax is available in 100-mL, 200-mL, and 500-mL vials. It is formulated to deliver the recommended dosage (150 mcg/kg of doramectin as the palmitate salt, 200 mcg/kg as the propionate salt, or 225 mcg/kg as the succinate salt) for cattle and (200 mcg/kg as the propionate salt) for swine.

**Precautions**:

- **Cattle**: Do not administer Dectomax to cattle for at least 28 days prior to slaughter for human consumption.
- **Swine**: Do not administer Dectomax to swine for at least 14 days prior to slaughter for human consumption.

**Environmental Considerations**: Dispose of the product container and any unused portion according to local regulations. Do not contaminate water, food, crops, or feed by storage or disposal.

PRODUCT DESCRIPTION:
Dectomax is a colorless to pale yellow, sterile solution containing 1% w/v doramectin (10 mg/mL). In cattle, Dectomax is formulated to deliver the recommended dosage (200 mcg/kg body weight) when given by subcutaneous (SC) or intramuscular (IM) injection. In swine, Dectomax is formulated to deliver the prescribed dosage (200 mcg/kg body weight) when given by SC injection.

PRODUCT INDICATIONS:
Dectomax has been developed specifically for cattle and swine. This product is approved for the treatment and control of gastrointestinal roundworms, lungworms, helminth infections of the kidney, eye and respiratory system, sucking lice, and mange mites.

ADMINISTRATION:

Doramectin, a member of the macrocyclic lactones, is a cationic, amphipathic, hydrophobic, and lipophilic compound that specifically inhibits neuronal membrane-embedded sodium voltage-gated channels. The membrane-embedded sodium channels are an important target in the insect and parasitic nematodes. This mechanism results in the paralysis and death of the parasite. Due to the lipophilic nature of doramectin, sufficient to treat 110 lb (50 kg) of body weight.

PRODUCT CHARACTERISTICS:
Dectomax is a ready-to-use, colorless to pale yellow, sterile solution containing 1% w/v doramectin (10 mg/mL). In cattle, Dectomax is formulated to deliver the recommended dosage (200 mcg/kg body weight) when given by subcutaneous (SC) or intramuscular (IM) injection. In swine, Dectomax is formulated to deliver the prescribed dosage (200 mcg/kg body weight) when given by SC injection.

DISPENSATION:
Distributed by:
ADMINISTRATION: Doramectin is formulated to deliver the recommended dosage (200 mcg/kg) by subcutaneous (SC) or intramuscular (IM) injection in cattle. Doramectin, sufficient to treat 75 lb (34 kg) of body weight.

Recommended Treatment Program for Swine:

For most effective results, cattle should be treated as close to emissions as possible after the end of the feed by feedlot operators. Studies have demonstrated the safety margin of Dectomax in neonatal calves; however, proper timing of treatment is important. A withdrawal period has not been established for this product in swine.

In cattle: For effective mange elimination, care must be taken to treat any new feeder pigs upon arrival at farm or before placement in clean quarters. Treat 7–14 days prior to farrowing to minimize effect on breeding performance.

In swine: For effective mange elimination, care must be taken to treat any new feeder pigs upon arrival at farm or before placement in clean quarters. Treat 7–14 days prior to breeding.

In swine: For effective mange elimination, care must be taken to treat any new feeder pigs upon arrival at farm or before placement in clean quarters. Treat 7–14 days prior to farrowing to minimize effect on breeding performance.
**Antiparasitic**

**Dectomax**

**Characteristics**

- 1% injectable solution for cattle and swine

**Uses**

- For treatment and control of gastrointestinal roundworms, lungworms, eyeworms, grubs, sucking lice, and mange mites. Dectomax injectable solution has been proved to effectively control infections and to protect against reinfection for 21 days, and when used according to the directions.

**Dosage and Administration**

- **Cattle:**
  - For subcutaneous and intramuscular injection. Do not use in female dairy cattle 20 months of age or older. A withdrawal period has not been established for this product in preruminating calves. Do not use in calves to be processed for veal.
  - Administer Dectomax injectable solution at the rate of 200 mcg/kg of body weight. Each mL contains 10 mg of doramectin, sufficient to treat 75 lb (34 kg) of body weight.

- **Swine:**
  - For IM injection in swine and cattle. Do not use in swine to be processed for human consumption within 35 days of treatment. Not for use in female dairy cattle 20 months of age or older. A withdrawal period has not been established for this product in swine.
  - Treat and control of sucking lice for 14 days, post-treatment. For treatment of biting lice in cattle, use of Dectomax Post-200 ml is not recommended.

**Contraindications**

- Administer Dectomax injectable solution at the rate of 200 mcg/kg of body weight. Each mL contains 10 mg of doramectin, sufficient to treat 75 lb (34 kg) of body weight.

**Warnings**

- For use in cattle. Keep out of reach of children. This product is hazardous to livestock and to humans. Do not use in cattle for human consumption. Do not use in dairy cattle 20 months of age or older. A withdrawal period has not been established for this product in cows 13 months of age or older.

**Precautions**

- For use in cattle. Keep out of reach of children. This product is hazardous to livestock and to humans. Do not use in cattle for human consumption. Do not use in dairy cattle 20 months of age or older. A withdrawal period has not been established for this product in cows 13 months of age or older.

**Environmental Considerations**

- Dectomax aqueous, non-ionic surfactant, is isolated from fermentations of selected strains derived from the milk of B. subtilis. Dectomax is formulated to deliver the recommended dosage (200 mcg/kg of body weight) when given by subcutaneous (SC) or intramuscular (IM) injection in cattle, and as the preferred route. Dectomax is available in 100-mL, 200-mL, and 500-mL, ready-to-use, colorless to pale yellow, sterile solution by the IM route. Inject in the neck, brisket, or between the scapulae. Do not inject intrathecally.

**Packing Information**

- For use in cattle. Keep out of reach of children. This product is hazardous to livestock and to humans. Do not use in cattle for human consumption. Do not use in dairy cattle 20 months of age or older. A withdrawal period has not been established for this product in cows 13 months of age or older.

**Label Black**

**Antiparasitic**

- 1% injectable solution for cattle and swine

** Hematology**

- White blood cells: 8,000 to 14,000/mm³
- Red blood cells: 4,500,000/mm³
- Platelets: 100,000/mm³

**Clinical Chemistry**

- Total proteins: 6.0 to 7.5 g/dL
- Albumin: 3.5 to 4.5 g/dL
- Glucose: 70 to 120 mg/dL
- Creatinine: 0.1 to 0.6 mg/dL
- Bilirubin: 0.1 to 0.3 mg/dL
- Electrolytes: Na+ 135 to 155 mEq/L, K+ 3.5 to 5.5 mEq/L, Cl− 95 to 115 mEq/L

**Adverse Effects**

- Adverse effects in users, to obtain more information, or to contact your veterinarian concerning the proper time for treatment, consult your veterinarian concerning the proper time for treatment, consult your veterinarian concerning the proper time for treatment, consult your veterinarian concerning the proper time for treatment.
DOBRA
ÁREA DE COLAGEM EM BRANCO

When used according to the label directions, the product is not expected to have an adverse impact on populations of dung-dependent insects.

**Environment:**
Ensure that when Dectomax is used in cattle, the product is not expected to have an adverse impact on populations of dung-dependent insects. The material safety data sheet (MSDS) contains information to develop strategies to prevent adverse environmental effects in aquatic environments.

**Carcinogenicity:**
This product is not considered to be a carcinogen. Studies have not demonstrated a positive association between use of Dectomax and an increased risk of cancer in laboratory animals.

**Mutagenicity:**
Studies have not demonstrated a positive association between use of Dectomax and an increased risk of mutations in laboratory animals.

**Reproductive Toxicity:**
There is no evidence of reproductive toxicity associated with the use of Dectomax in laboratory animals. Studies have not demonstrated an increased incidence of birth defects, decreased fertility, or impaired reproductive function in laboratory animals.

**Repeated Dose Toxicity:**
There is no evidence of repeated dose toxicity associated with the use of Dectomax in laboratory animals. Studies have not demonstrated an increased incidence of adverse clinical signs, body weight changes, or pathological changes in laboratory animals.

**Local Effects:**
There is no evidence of local effects associated with the use of Dectomax in laboratory animals. Studies have not demonstrated an increased incidence of irritation, edema, or ulceration at the site of injection in laboratory animals.

**Environmental Fate:**
Doramectin, the active ingredient in Dectomax, is highly active, broad-spectrum parasiticide for parenteral use in cattle and swine. It is formulated to deliver the recommended dosage (200 mcg/kg) ready-to-use, colorless to pale yellow, sterile solution.

**Product Indications:**
Dectomax is highly effective against all stages of cattle parasitism. Parenteral treatment is indicated for the control of gastrointestinal roundworms, lungworms, kidney worms, and other parasitism.

**Dosage:**
Administer Dectomax injectable solution at the recommended dosage of 200 mcg doramectin per kg body weight. The recommended dose is sufficient to treat 110 lb (50 kg) of body weight.

**Administration:**
For SC injection in cattle only. For treatment and control of gastrointestinal roundworms, lungworms, kidney worms, and other parasitism. For treatment of sucking lice in cattle, the product is not expected to have an adverse impact on populations of dung-dependent insects.

**Residue Warnings:**
Cattle:
Do not slaughter for human consumption within 35 days of treatment. Not for use in female dairy cattle 20 months of age or older. A withdrawal period has not been established for this product in cattle. This product is approved for the treatment and control of gastrointestinal roundworms, lungworms, kidney worms, and other parasitism.

**Environmental Care:**
Contact your veterinarian for assistance in the diagnosis, treatment, and control of parasitism.

**Sweating Sucking Lice (Precautions):**
Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasites. Administer Dectomax regularly as follows:

**Safety Information:**
To report adverse reactions, contact your veterinarian or the manufacturer.
