Mycoplasma Gallisepticum Vaccine

Live Culture

Vacuna contra Mycoplasma Gallisepticum

Cultivo Vivo

Poulvac® Myco F

For Veterinary Use Only / Uso Veterinario

This product has been shown to be effective for the vaccination of healthy chickens 9 weeks of age or older prior to field exposure and the onset of egg production against *Mycoplasma gallisepticum*. Duration of immunity has not been established. For more information regarding efficacy and safety data, go to productdata.aphis.usda.gov.

Store at 2°-8°C (35°-46°F). Use entire contents when first opened. Inactivate unused contents before disposal. Do not vaccinate within 21 days of slaughter. Contains penicillin as a preservative. Do not mix with other products, except as specified. In case of human exposure, contact a physician.

Este producto ha demostrado ser eficaz en la vacunación de pollos sanos de 9 semanas de edad o mayores contra *Mycoplasma gallisepticum* antes de la exposición natural de campo y el inicio de la producción de huevo. La duración de la inmunidad no ha sido establecida para este producto. Para mayor información sobre los datos de seguridad y eficacia, por favor consulte productdata.aphis.usda.gov.

Almacenar entre 2° y 8° (35° y 46°F). Utilizar todo el contenido de cada frasco una vez abierto. Inactivar sobrantes o el contenido sin utilizar antes de desechar el envase. No vacunar dentro de los 21 días anteriores al sacrificio. Esta vacuna contiene penicilina como agente conservante. No mezclar con otros productos a excepción de lo especificado. Consulte al Médico en caso de exposición al producto.

Mycoplasma Gallisepticum Vaccine

Live Culture

Poulvac® Myco F

This product has been shown to be effective for the vaccination of healthy chickens 9 weeks of age or older prior to field exposure and the onset of egg production against *Mycoplasma gallisepticum*. Duration of immunity has not been established. For more information regarding efficacy and safety data, go to productdata.aphis.usda.gov.

Poulvac Myco F vaccine is a live vaccine containing the F strain of *Mycoplasma gallisepticum* in a freeze-dried preparation sealed under vacuum.

CONTRAINDICATIONS: Poulvac Myco F should not be administered within 1 week before or after vaccination with live Newcastle, bronchitis or laryngotracheitis vaccines, or within 3 days before to 7 days after treatment with oxytetracycline or chlortetracycline.

For spray administration:

1. Do not open and mix the vaccine until ready for use.
2. Mix only one vial at a time and use entire contents within 1 hour.
3. Remove the tear-off aluminum seal from the vaccine vial without disturbing the rubber stopper.
4. Use cool, clean non-chlorinated drinking water to which evaporated milk has been added at a rate of one ounce per quart (30 mL per liter).
5. Holding the vial submerged in water, lift the lip of the rubber stopper so that the water is sucked into the vial.
6. Reseat the stopper and shake to thoroughly dissolve the vaccine. The vaccine is now ready for use.

Proper spray application of this vaccine is accomplished only through use of a clean sprayer emitting a coarse spray. Use the spray method only in houses that can be closed during vaccination and for at least 15 minutes thereafter. Cross winds, drafts, or operating ventilation fans may prevent effective application.

After rehydrating the vaccine, further dilute each 1,000 doses to 100 mL using the water with milk. Place vaccine in sprayer container. Spray droplets of 40-50 microns (coarse) average size are desirable.

Apply vaccine over all birds at the rate of one dose per square foot or one dose per bird, whichever is greater.

For intraocular administration:

1. To rehydrate 1 vial of vaccine with 1 vial of diluent, remove aluminum seal and rubber stopper from vaccine vial and diluent bottle. Avoid contamination of the stoppers and the contents.
2. Half-fill the vaccine vial with diluent.
3. Replace the stopper and shake the vial until vaccine material is dissolved.
4. Carefully pour the rehydrated-dissolved vaccine into the plastic diluent bottle. Replace the bottle stopper and shake once again to obtain a uniform mixture.
5. Remove diluent-bottle closure and fit drop dispenser into bottle. The vaccine is now ready for use.
6. To vaccinate intraocularly, hold bird and place 1 drop of vaccine into the eye. Allow the vaccine to spread over the eye before releasing the bird into a holding area for vaccinated birds.

CAUTION:

1. For veterinary use only.
2. Vaccinate only healthy birds. To avoid interference with development of protection, chickens to be vaccinated should not be given any antibiotic and/or sulfonamide medication for 3 days before and 7 days after vaccination.
3. All birds within a flock should be vaccinated on the same day. Isolate other susceptible birds on the premises from the birds being vaccinated.
4. Do not spill or spatter the vaccine. Use entire contents of vial when first opened. Inactivate empty bottles, caps and all unused vaccine and accessories.

5. Wash hands thoroughly after using the vaccine.
6. Do not dilute the vaccine or otherwise stretch the dosage.
7. *Mycoplasma gallisepticum* F Strain is known to produce clinical disease in turkeys. DO NOT ALLOW TURKEYS TO COME IN CONTACT WITH VACCINE OR VACCINATED CHICKENS.

RECORDS: Keep a record of vaccine type, quantity, serial number, expiration date, and place of purchase; the date and time of vaccination; the number, age, breed, and location of the birds; names of operators performing the vaccination and any observed reactions.

Technical inquiries should be directed to Zoetis Inc. Veterinary Services, (888) 963-8471.
