For increased egg production and improved feed efficiency during the first seven months of production.

For reduction in the number of liver condemnations due to abscesses in feedlot beef cattle.

For increased rate of weight gain and improved feed efficiency.

For increased rate of weight gain and improved feed efficiency in quail not over 5 weeks of age.

Bacitracin Methylene Disalicylate
Type A Medicated Article
Antibacterial

For supplementing rations of swine, chickens, turkeys, pheasants, quail and feedlot beef cattle

Active ingredient: Bacitracin (Master Standard).
Each pound contains feed grade bacitracin methylene disalicylate equivalent to 30 grams bacitracin.

Composition: Bacitracin Methylene Disalicylate adapted for microbiological production of bacitracin; calcium carbonate. A dried precipitated fermentation product obtained by culturing B. licheniformis on media containing PMS 328 and then reducing medication to prevention level (50 g/ton).

For manufacturing medicated poultry and livestock feeds only

Mixing directions: See label for mixing directions.

Species: Beef cattle, swine, chickens, turkeys, pheasants, quail and feedlot beef cattle

Net wt 50 LB (22.68 kg)

For control of swine dysentery (bloody scours) associated with Brachyspira hyodysenteriae in pigs weighing over 40 lbs. Feed 250 grams per ton of complete feed on premises with a history of swine dysentery, up to 250 lbs body weight. Feed 250 grams per ton of complete feed on premises with a history of swine dysentery up to 250 lbs body weight.

For control of Clostridium sordellii enteritis in swine associated with C. perfringens in feedlot beef cattle. Feed 250 grams per ton of complete feed on premises with a history of C. perfringens.

For control of Clostridium sordellii enteritis in swine associated with C. perfringens in feedlot beef cattle. Feed 250 grams per ton of complete feed on premises with a history of C. perfringens.

Feed containing an approved level of bacitracin methylene disalicylate should be the sole ration.

The 250 g/ton level will provide 5 to 7 mg/lb in swine weighing 40 to 250 lbs.

Note: Where minimum levels are shown, increase the antibiotic concentration within approved range when disease is severe.

As an aid in control of transmissible enteritis in growing turkeys complicated by organisms susceptible to bacitracin methylene disalicylate.

For control of necrotic enteritis caused or complicated by Clostridium spp. or other organisms in turkeys. Feed 250 grams per ton of complete feed on premises with a history of necrotic enteritis in turkeys. Consult a poultry diagnostic laboratory or pathologist to determine the diagnosis and advice regarding treatment of the disease condition.
