Vacuna Diarrea Viral del Bovino

Virus Activos Modificados

**INDICACIONES:** Bovi-Shield GOLD BVD se puede administrar a las hembras preñadas siempre que las vacunaciones anteriores hayan sido efectuadas. La vacunación de becerros vacunados con la segunda dosis administrada aproximadamente 30 días antes de la reproducción.

**PRODUCT DESCRIPTION:** Bovi-Shield GOLD BVD es un púmpin de preparación con las cepas de virus de la diarrea viral bovina (BVD) tipos 1 y 2, más un adyuvante en la prevención de la diarrea viral bovina causada por el virus de la diarrea viral bovina (BVD) tipos 1 y 2. Cuando se administra subcutáneamente, una duración de la inmunidad de por lo menos 9 meses ha sido demostrada. Bovi-Shield GOLD BVD se puede administrar a las hembras preñadas siempre y cuando se hayan vacunado de acuerdo con las instrucciones de la etiqueta ya sea con Bovi-Shield GOLD FP o PregGuard GOLD FP dentro de los 12 meses anteriores. Bovi-Shield GOLD BVD también se puede administrar a los becerros que estén siendo amamantados por vacas preñadas siempre y cuando estas últimas hayan sido vacunadas dentro de los 12 meses anteriores según acuerdos de descuento. Para asegurar la seguridad en el ganado gestante, las vaquillas deben recibir al menos dos dosis de Bovi-Shield GOLD BVD y los becerros vacunados antes de los 6 meses de edad. Las vacunas deben administrarse con la segunda dosis administrada aproximadamente 30 días antes de la reproducción.

**PRECAUCIONES:** No uses este producto en vacas preñadas (pues puede producir abortos) a menos que hayan sido vacunadas, de acuerdo a las instrucciones de la etiqueta, con

**USO:**
- Para el ganado vacuno.
- Debe ser administrado en dos dosis.
- La primera dosis debe administrarse al menos 21 días antes de la reproducción.
- La segunda dosis debe administrarse aproximadamente 30 días antes de la reproducción.

Se recomienda la vacunación de becerros de acuerdo con las instrucciones de la etiqueta. Se recomienda la vacunación de becerros de acuerdo con las instrucciones de la etiqueta. Se recomienda la vacunación de becerros de acuerdo con las instrucciones de la etiqueta.
Bovine Virus Diarrhea Vaccine

**Modified Live Virus**

**Bovi-Shield GOLD® BVD**

**INDICATIONS:** Bovi-Shield GOLD BVD is for vaccination of healthy cattle to prevent viremia caused by bovine virus diarrhea (BVD) virus Types 1 and 2, and as an aid in preventing respiratory disease caused by IBRV Types 1 and 2 strains. When administered subcutaneously, duration of immunity has been demonstrated to be at least 6 months. Bovi-Shield GOLD BVD may be administered to pregnant cattle provided they were vaccinated, according to the label directions, with any Bovi-Shield GOLD FP or PregGuard GOLD FP vaccine within the past 12 months. Bovi-Shield GOLD BVD may also be administered to calves nursing pregnant cows provided their dams were vaccinated within the past 12 months as described above.

To help ensure safety in pregnant cattle, foals must receive at least 2 doses of any Bovi-Shield GOLD FP or PregGuard GOLD FP product with the second dose administered approximately 30 days prepartum.

**PRODUCT DESCRIPTION:** Bovi-Shield GOLD BVD is a freeze-dried preparation modified by live virus (IMViC) strains of BVD (Types 1 and 2) viruses, plus a sterile diluent used to rehydrate the freeze-dried vaccine.

**DIRECTIONS:**

- General Directions: Vaccination of healthy cattle is recommended. Ascopically rehydrate the freeze-dried vaccine with the sterile diluent provided, shake well, and administer 2 mL subcutaneously (SC) or intramuscularly (IM). In accordance with Bovine Quality Assurance guidelines, this product should be administered SC in the neck region.

- Primary Vaccination: Administer a single 2 mL, dose to healthy cattle. To avoid possible maternal antibody interference with active immunization, calves vaccinated before the age of 6 months should be revaccinated after 6 months of age or at weaning.

- Revaccination: Annual revaccination with a single dose is recommended. Good animal husbandry and herd health management practices should be employed.

**PRECAUTIONS:** Do not use in pregnant cows (aborted or culled) unless they were vaccinated, according to label directions, with any Bovi-Shield GOLD FP or PregGuard GOLD FP vaccine within the past 12 months. Do not use in calves nursing pregnant cows unless their dams were vaccinated within the past 12 months as described above.

To help ensure safety in pregnant cattle, heifers must receive at least 2 doses of any Bovi-Shield GOLD FP or PregGuard GOLD FP product with the second dose administered approximately 30 days prepartum.

Store at 2°C-7°C. Prolonged exposure to higher temperatures or direct sunlight may adversely affect potency. Do not freeze. Use entire contents when first opened.

Store refrigerated and reconstituted sterile diluent should be used to administer this vaccine.

Do not sterile with chemicals because traces of disinfectant may inactivate the vaccine.

Burn containers and all unused contents.

Do not vaccinate within 21 days before slaughter.

Contains gentamicin as preservative.

As with many vaccines, anaphylaxis may occur after use. Initial antidote of choice is epinephrine.
