EAZI-BREED® CIDR™ (progesterone intravaginal insert) Cattle Insert

Cattle Insert Each EAZI-BREED CIDR Cattle Insert contains 1.38 grams of progesterone in molded silicone over a flexible nylon spine. Attached to each EAZI-BREED CIDR Cattle Insert is a polyester tail.

NET CONTENTS: 10 EAZI-BREED CIDR Cattle Inserts per bag

NADA #111-290, Approved by FDA

DRUG FACTS

Active ingredient: Progesterone, 1.38 grams per EAZI-BREED CIDR Cattle Insert

Uses: Used alone or in combination with estrogen to synchronize estrus cycles in cattle, and replacement beef and dairy cattle

Intravaginal use in cattle: 
- Induction of estrus cycles in anoestrus lactating dairy cows
- Synchronization of the estrus in anoestrus lactating dairy cows hormone administered at the immediately preceding estrus
- Advancement of first postpartum estrus in suckled beef cows
- Advancement of first postpartum estrus in replacement beef heifers

Removal of the EAZI-BREED CIDR Cattle Insert at treatment Day 7 results in a rapid fall in plasma progesterone levels, which result in the occurrence of estrus in those animals responding to treatment.

WARNINGS:

- Pregnancy: NADA #111-290, Approved by FDA

DO NOT USE:
- In severe cases, resolve not toreed whereby the tissue associated with the implant is allowed to heal.
- In severe cases, resolve not toreed whereby the tissue associated with the implant is allowed to heal.
- In severe cases, resolve not toreed whereby the tissue associated with the implant is allowed to heal.

YOU MAY NOT USE:
- Any form of EAZI-BREED CIDR Cattle Inserts in animals known to be infected withed, especially in heifers. Avoid infected conditions during treatments as well. Particular care should be used to avoid the presence of the EAZI-BREED CIDR Cattle Insert by pulling, gently but firmly, on the protruding polyester tail.

Insertion:
- For use in animals not diagnosed with a corpus luteum on either ovary via ultrasonography at a 7 to 14 day interval, such as on Day 35 and Day 42 post calving.
- For use in cows diagnosed twice without a corpus luteum on either ovary via ultrasonography at a 7 to 14 day interval, such as on Day 35 and Day 42 post calving.
- For use in cows diagnosed with two blood or milk samples collected at a 7 to 14 day interval, such as samples collected on Day 35 and Day 42 post calving.
- For use in cows diagnosed with low concentration of progesterone in two blood or milk samples collected at a 7 to 14 day interval, such as samples collected on Day 35 and Day 42 post calving.

Removal:
- Remove EAZI-BREED CIDR Cattle Insert at treatment Day 7 results in a rapid fall in plasma progesterone levels, which result in the occurrence of estrus in those animals responding to treatment.

STORAGE:
- Store at controlled room temperature 20° to 25°C (68° to 77°F) with excursions between 15° to 30°C (59° to 86°F).

OTHER INFORMATION:
- Do not use with any other nonsteroidal anti-inflammatory drug or estrogenic medicine.
