## FELINE FeLV Injectable

This product has been shown to be effective for the vaccination of healthy cats 9 weeks of age or older against feline leukemia virus. Duration of immunity has not been established. For more information regarding efficacy and safety data, go to [productdata.aphis.usda.gov](http://productdata.aphis.usda.gov).

**Directions:** Shake well. Aseptically administer 1 mL subcutaneously. Healthy cats 9 weeks of age or older should receive 2 doses administered 3–4 weeks apart. Historically, annual revaccination with this product was recommended. The need for annual booster vaccinations has not been established for this product; consultation with a veterinarian or the manufacturer is recommended.

**Precautions:** Store at 2°–8°C. Prolonged exposure to higher temperatures may adversely affect potency. Do not freeze. Sterilized syringes and needles should be used to administer this vaccine. Contains gentamicin as preservative. This product has not been tested in pregnant animals. As with many vaccines, anaphylaxis may occur after use. Initial antidote of epinephrine is recommended and should be followed with appropriate supportive therapy. Do not mix with other products. In case of human exposure, contact a physician.

Technical inquiries should be directed to Zoetis Inc. Veterinary Services, (888) 963-8471.

This product has been shown to be efficacious in healthy animals. A protective immune response may not be elicited if animals are incubating an infectious disease, are malnourished or parasitized, are stressed due to shipment or environmental conditions, are otherwise immunocompromised, or the vaccine is not administered in accordance with label directions.
