VANGUARD[®]

B

Intranasal

This product has been shown to be effective for the vaccination of healthy dogs 3 weeks of age or older against *B. bronchiseptica*. Duration of immunity has not been established. For more information regarding efficacy and safety data, see productdata.aphis.usda.gov.

Directions: Rehydrate with the accompanying sterile diluent. Shake well and draw contents back into the syringe. Remove the needle and attach the enclosed applicator tip. Immediately administer 0.5 mL into each nostril. Historically, annual revaccination with this product was recommended. The need for annual booster vaccinations has not been established for this product; consultation with a veterinarian or the manufacturer is recommended.

Precautions: This product is designed for intranasal use only with the enclosed applicator tip. Do not vaccinate dogs parenterally. Store at 2°-8°C. Prolonged exposure to higher temperatures and/or direct sunlight may adversely affect potency. Do not freeze. Inactivate unused contents before disposal. This product has not been tested in pregnant animals. In case of anaphylactoid reaction, administer epinephrine. Do not mix with other products, except as specified above. In case of human exposure, contact a physician.

Technical inquiries should be directed to Zoetis Inc. Veterinary Services, (888) 963-8471.
