CANINE CV

Injectable

50 Vials (1 dose: 1 mL)

Canine Coronavirus Vaccine

KILLED VIRUS

Thimerosal Free

VANGUARD®

CANINE CV Injectable

This product has been shown to be effective for the vaccination of healthy dogs 6 weeks of age or older against canine coronavirus. Duration of immunity has not been established. For more information regarding efficacy and safety data, go to productdata.aphis.usda.gov.

Directions: Shake well. Aseptically administer 1 mL subcutaneously or intramuscularly. Healthy dogs should receive 2 doses administered 2–3 weeks apart. The presence of maternal antibody is known to interfere with the development of active immunity in puppies and additional boosters will be required in most young animals. Historically, annual revaccination with this product was recommended. The need for annual booster vaccinations has not been established. For advice on revaccination, consult your veterinarian or the manufacturer.

Precautions: Store upright at 2°–8°C. Prolonged exposure to higher temperatures and/or direct sunlight may adversely affect potency. Do not freeze. Sterilized syringes and needles should be used to administer this vaccine. Contains gentamicin as preservative. This product has not been tested in pregnant animals. In case of anaphylactoid reaction, administer epinephrine. Do not mix with other products. In case of human exposure, consult a physician.

Technical inquiries should be directed to Zoetis Inc. Veterinary Services, (888) 963-8471.

This product has been shown to be efficacious in healthy animals. A protective immune response may not be elicited if animals are incubating an infectious disease, are malnourished or parasitized, are stressed due to shipment or environmental conditions, are otherwise immunocompromised, or the vaccine is not administered in accordance with label directions.
