SATISFACTION GUARANTEE GUIDELINES

If you or your clients feel that REVOLUTION® (selamectin) is not providing sufficient protection for the indications it is labeled for, please call our medical support team to discuss our Revolution Satisfaction Guarantee. Zoetis will work with you to ensure that you and your clients are satisfied with the performance of Revolution or we will refund the purchase price.*

The Revolution Satisfaction Guarantee is available to individuals who have purchased Revolution from a veterinarian or via a veterinarian’s prescription from a Zoetis approved online distributor.** All claims are evaluated on a case-by-case basis based on the program guidelines and requirements outlined below.

HEARTWORM DISEASE GUIDELINES: If any dog determined by a licensed veterinarian to be free of heartworm infection at the onset of treatment with Revolution develops heartworm disease, we will provide reimbursement (up to $750 and the acquisition cost of mefloquine dihydrochloride) associated with the diagnosis and treatment of heartworm disease and provide a year’s supply of Revolution. Feline heartworm cases will be evaluated on a case-by-case basis.

Requirements:
- Revolution was used, at all times, according to label directions.
- The use of an antigen test will be the standard for determining heartworm status. Knott’s or any filter test for the detection of microfilariae is not sufficient evidence for pretreatment heartworm negative status.
- Two separate blood samples using at least two different brands of antigen tests are required to document heartworm positive status.
- Dogs previously treated for heartworm disease must have a negative antigen test prior to starting Revolution.
- Dogs starting or changing heartworm preventative are required to have at least two negative antigen tests at least 6 months after initiation of Revolution treatment.†

FLEA GUIDELINES: The affected dog or cat must be on Revolution for 60 days prior to the report. All other pets in the home must also be treated with a flea control product for 60 days prior to the report. We will provide reimbursement up to $30 for an alternative approved flea treatment or reimburse you for the cost of one dose of Revolution. This guarantee does not cover any other costs, including, but not limited to, those associated with the control of flea infestations in and around living quarters, medical treatments, and procedures.

TICK GUIDELINES: Revolution protects against the American Dog Tick (Dermacentor variabilis) in dogs. We will reimburse you up to $30 for an alternative approved tick treatment or provide reimbursement for the cost of one dose of Revolution to be administered 2 weeks after the previous dose as per label directions. While Revolution has not demonstrated efficacy against ticks in cats, if a cat receiving Revolution becomes infested with ticks, we will provide reimbursement up to $30 toward an approved tick treatment of your choice.

HOOKWORM, ROUNDWORM, WHIPWORM, TAPEWORM GUIDELINES: Revolution has not demonstrated efficacy against hookworms, roundworms, whipworms or tapeworms in dogs. However, if you are dispensing Revolution to a dog and such dog is found to be positive with T. canis, A. caninum, T. vulpis, D. caninum, T. pisiformis and/or Echinococcus spp eggs demonstrated in the fecal sample, we will provide you CESTEX® (eprinomectin) free of charge or provide reimbursement for the reasonable and customary costs up to $60 for an approved treatment. In cats, Revolution is indicated for the treatment of roundworm (Toxocara cati) and intestinal hookworm (Ancylostoma tubaeforme) infections. If you are dispensing Revolution and a cat is found to be positive with T. cati and/or A. tubaeforme eggs demonstrated in the fecal sample, we will provide reimbursement for the reasonable and customary costs up to $60 for an approved treatment. Revolution has not demonstrated efficacy against tapeworms in cats. However, if you are dispensing Revolution and a cat tests positive for tapeworms, we will provide you Cestex free of charge or provide reimbursement for the reasonable and customary costs up to $90 for an approved treatment.

OTHER LABEL RELATED INDICATIONS (SARCOPTIC MANGE IN DOGS AND EAR MITES) GUIDELINES: We will provide reimbursement for the reasonable and customary costs up to $30 for a treatment of approved label indications if you believe Revolution isn’t performing as labeled.

IMPORTANT SAFETY INFORMATION: Do not use REVOLUTION on sick, weak, or underweight animals. Use only on cats 8 weeks and older. Use only on dogs 6 weeks and older. Prior to administration, dogs should be tested for heartworms. In cats, side effects may include digestive upset and temporary hair loss at application site with possible inflammation. In people, REVOLUTION may be irritating to skin and eyes. Wash hands after use. See full Prescribing Information, attached.

* Subject to program requirements outlined in this document.
** Guarantee applies to current products purchased from a veterinary hospital or from one of the following Zoetis approved online distributors: VetSource, Vet’s First Choice, Proxy RX, VetStreet, My Vet Direct, and JAT Rx. Revolution obtained free of charge is not eligible. All claims via distribution must be accompanied by a valid proof of purchase.

Zoetis reserves the right to modify or discontinue this program at any time for any reason. Call Zoetis Veterinary Medical Information & Product Support with Satisfaction Guarantee questions at 1-888-ZOETIS1.

† Dogs that have not previously received heartworm prevention, or those that have received inconsistent heartworm prevention, prior to starting Revolution may test negative when therapy is initiated despite being infected. This may occur due to very low worm burdens, the inability of antigen heartworm tests to reliably detect infections less than five months post-infection, as well as the potential of macrocytic lactates to delay the development of heartworms. As such, a single test—or two tests separated by six months after the initiation of a preventative regimen—will miss some infections. At this time, the American Heartworm Society recommends three consecutive “negative” antigen tests six months apart to potentially classify dogs as heartworm disease “negative.”

Revolution (selamectin) Topical Parasiticide For Dogs and Cats

CAUTION: US Federal law restricts this drug to use by or on the order of a licensed veterinarian.

DESCRIPTION: Revolution (selamectin) Topical Parasiticide is available as a colorless to yellow, ready to use solution in single dose tubes for topical (dermal) treatment of dogs six weeks of age and older and cats eight weeks of age and older. The content of each tube is formulated to provide a minimum of 2.7 mg/lb (6 mg/kg) of body weight of selamectin. The chemical composition of selamectin is (5Z,25S)-25-cyclohexyl-4-0-decyl-2,3-dimethyl-4H-1-benzopyran-4-one.

DIRECTIONS FOR USE: The dose recommended for use in dogs six weeks of age and older and cats eight weeks of age and older for the following parasites and indications:

Dogs:
- Revolution kills adult fleas and prevents flea eggs from hatching for one month and is indicated for the prevention and control of flea infestations (Ctenocephalides felis), prevention of heartworm disease caused by Dirofilaria immitis, and the treatment and control of ear mite (Otodectes cynotis) infestations. Revolution is also indicated for the treatment and control of sarcoptic mange (Sarcoptes scabiei) and for the control of tick infestations due to Dermacentor variabilis.

Cats:
- Revolution kills adult fleas and prevents flea eggs from hatching for one month and is indicated for the prevention and control of flea infestations (Ctenocephalides felis), prevention of heartworm disease caused by Dirofilaria immitis, and the treatment and control of ear mite (Otodectes cynotis) infestations. Revolution is also indicated for the treatment and control of roundworm (Toxocara cati) and intestinal hookworm (Anchystoma tubaeforme) infections in cats.

WARNINGS: Not for oral use. Keep out of the reach of children.

In humans, Revolution may be irritating to skin and eyes. Reactions such as hives, itching and skin redness have been reported in humans in rare instances. Individuals with known hypersensitivity to Revolution should be pre-treated by a product of caution or consult a health care professional. Revolution contains isopropyl alcohol and the preservative butylated hydroxytoluene (BHT). Wash hands after use and wash off any product in contact with the skin immediately with soap and water. If contact with eyes occurs, then flush eyes copiously with water. In case of ingestion by a human, contact a physician immediately. The material safety data sheet (MSDS) provides additional Occupational Safety information. For a copy of the MSDS or to report adverse reactions attributable to exposure to this product, call 1-888-963-8471.

Flammable - Keep away from heat, sparks, open flames or other sources of ignition.

Do not use in sick, debilitated or underweight animals (see SAFETY).

PRECAUTIONS:

For the prevention of heartworm disease, Revolution must be administered on a monthly basis. Revolution may be administered year-round or at least within one month after the animal’s first exposure to mosquitoes and monthly thereafter until the end of the mosquito season. The final dose must be given within one month after the last exposure to mosquitoes. Laboratory and clinical studies revealed that maximum heartworm killing was missed and monthly intensive dosing was not effective when immediate administration of Revolution and resumption of monthly dosing will minimize the opportunity for the development of adult heartworms. When replacing another heartworm preventive product in a heartworm prevention and control program, the first dose of Revolution must be given within a month of the last dose of the former medication.

Revolution may reduce the effectiveness of Revolution against fleas or heartworm. Stiff hair, clumping of hair, discoloration, or a slight powdery residue may be observed at the treatment site in some animals. These effects are temporary and do not affect the safety or effectiveness of the product. Discard empty tubes in your ordinary household refuse.

Ear Mite Treatment in Dogs and Cats

For the treatment of ear mite (O. cynotis) infestations in dogs and cats, Revolution should be administered once as a single topical dose. A second monthly dose may be required in some dogs. Monthly use of Revolution with or without concurrent ear mite infestations is indicated for prevention of ear mite infestations in cats. In the clinical field trial, no ear mite infections were reported in cats and many animals still had debris in their ears after the second dose. Cleansing of the infested ears is recommended to remove the debris.

Ear Mite Treatment in Dogs

For the treatment of ear mites (D. immitis) and the treatment and control of ear mite (Otodectes cynotis) infestations. Revolution is also indicated for the treatment and control of roundworm (Toxocara cati) and intestinal hookworm (Anchystoma tubaeforme) infections in cats.

Ear Mite Treatment in Cats

For the treatment of ear mite (O. cynotis) infestations in dogs and cats, Revolution should be administered once as a single topical dose. A second monthly dose may be required in some dogs. Monthly use of Revolution with or without concurrent ear mite infestations is indicated for prevention of ear mite infestations in cats. In the clinical field trial, no ear mite infections were reported in cats and many animals still had debris in their ears after the second dose. Cleansing of the infested ears is recommended to remove the debris.

Tick Control in Dogs

For the prevention and control of heartworm (Dermacentor variabilis) infestations in dogs, Revolution should be administered on a monthly basis. In heavy tick infestations, complete efficacy may not be achieved after the first dose. In these cases, one additional dose may be administered two weeks after the previous dose, with monthly dosing continued thereafter.

Nematode Treatment in Cats

For the treatment and control of intestinal hookworm (A. tubaeforme) and roundworm (T. cati) infections, Revolution should be applied once as a single topical dose.

SAFETY:

Revolution has been tested safe in over 100 different pure and mixed breeds of healthy dogs and over 15 different pure and mixed breeds of healthy cats, including pregnant and lactating females, breeding males and females, puppies six weeks of age and older, kittens eight weeks of age and older, and avermectin-sensitive collies. In a six-month field trial with dogs and cats of all ages and breeds, the most common reaction observed in protocol animals was a 98% decrease in flea infestations. In the clinical field trial, no ear mite infections were reported in cats and many animals still had debris in their ears after the second dose. Cleansing of the infested ears is recommended to remove the debris.

DOGS: In safety studies, Revolution was administered at 1, 3, 5, and 10 times the recommended dose to six-week-old puppies, and no adverse reactions were observed. The safety of Revolution administered orally was also tested in case of accidental oral ingestion. Oral administration of Revolution at the recommended topical dose to 8-month-old beagles did not cause any adverse reactions. Administration of 2.7 mg/lb or 5.4 mg/lb over a period of 2 months caused no adverse reactions. A single oral dose of 130 mg/kg selamectin in dogs resulted in accord with the following tables. (See ADMINISTRATION for the recommended treatment intervals.)

For cats over 12.5 lbs use the appropriate combination of tubes.

For dogs over 130 lbs use the appropriate combination of tubes. Recommended for use in dogs 6 weeks of age and older and in cats 8 weeks of age and older.

ADMINISTRATION: A veterinarian or veterinary technician should demonstrate or instruct the pet owner regarding the appropriate technique for applying Revolution topically to dogs and cats prior to first use.

Store Revolution in your ordinary household refuse.

STORAGE CONDITIONS: Store below 30°C (86°F).
