

1- to 2 YEAR-OLDS

QUEST[®] GEL
(moxidectin)

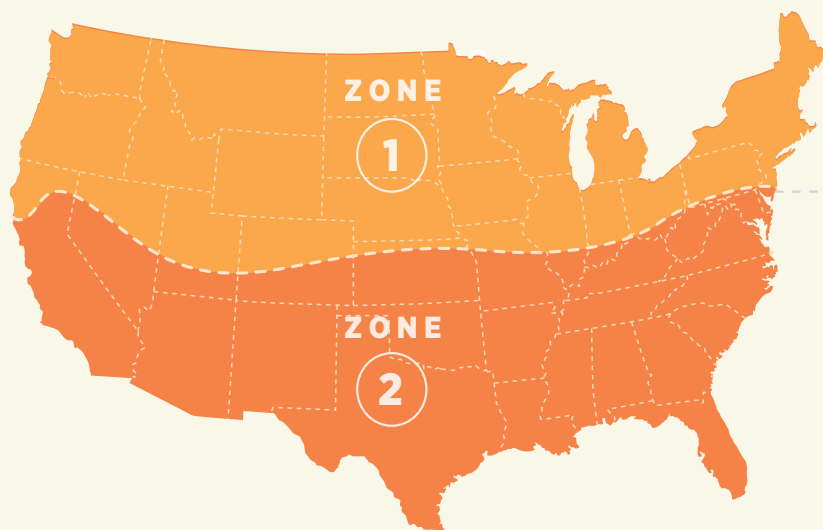

QUEST[®] PLUS GEL
(moxidectin/praziquantel)

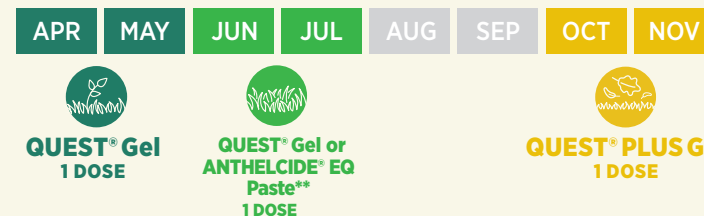

YOUNG HORSES ARE MORE SUSCEPTIBLE TO PARASITES

WHEN DO I DEWORM MY 1- to 2-YEAR-OLD HORSE?

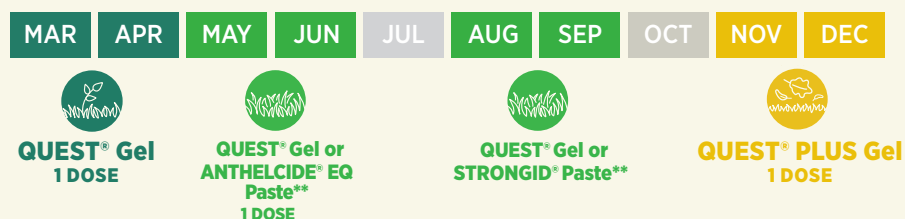

It depends on the length of your grazing season. Find your zone on the map below to help determine the best timing.¹

ZONE 1 GRAZING SEASON SHORTER THAN 6 MONTHS

ZONE 2 GRAZING SEASON LONGER THAN 6 MONTHS

*500+ eggs per gram (EPG) in FEC test.

**If verified still effective against small strongyles through fecal egg count reduction test (FECRT).

EXPERT-RECOMMENDED APPROACH TO PARASITE CONTROL IN YOUNG HORSES

According to current American Association of Equine Practitioners (AAEP) guidelines, horses between 1 and 2 years of age require special attention as they are at higher risk for developing disease from parasite infection. That's why experts recommend 3 to 4 yearly treatments for horses in this age group.

Do not use QUEST Gel or QUEST PLUS Gel in foals less than 6 months of age or in sick, debilitated and underweight horses. Do not use in other animal species, as severe adverse reactions, including fatalities in dogs, may result. Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasitism.
