

DORMOSEDAN® GEL
(detomidine hydrochloride)

**Care for them
with confidence**

Convenient and consistent oral sedation

Dormosedan® Gel (*detomidine hydrochloride*) is the oral formulation of the #1 veterinarian-trusted equine sedative¹ and the only FDA-approved oral sedative of its kind that reliably keeps horses calm and helps handlers stay safe.

Compassionate care with confidence

For routine horse care and husbandry procedures where horses may become anxious and difficult to work with, Dormosedan Gel can provide a safe solution.

Mild-standing sedative available with a veterinarian's prescription

Helps facilitate a calm experience for both horses and handlers when a veterinarian cannot be present

Easy-to-use, single-dose syringe administered **under the horse's tongue**

A safe alternative to physical restraints prior to stressful situations and before a wide variety of procedures:

Farrier work

Bandaging

Basic first-aid care

Body clipping

Mane pulling

Sheath cleaning

First-time supervised turnout on a dry lot for fractious horses

Fireworks

STEP ONE

Use impermeable gloves when handling the product.

Remove the horse's access to all food and water sources.

Remove the syringe from the outer carton.

While holding the plunger, turn the ring-stop on the plunger until the ring slides freely up and down the plunger.

STEP TWO

Position the ring so that the side nearest the barrel is at the desired volume marking (see dosing information).

Turn the ring to secure it in place. Test the ring to ensure it does not slide.

Make sure the horse's mouth contains no feed.

Easy-to-use,
single-dose
syringe

DOSING INFORMATION

STEP THREE

Remove the cap and place the syringe tip into the corner of the horse's mouth **underneath the tongue**.

Depress the plunger until the ring-stop contacts the barrel, depositing the product beneath the tongue.

STEP FOUR

Take the syringe out of the horse's mouth, recap and return it to the outer carton for disposal.

Remove and discard gloves.

Place the horse in a safe, quiet area for a minimum of 40 minutes while the sedation takes effect.

Withhold food and water until the sedative effects wear off.

Ranked #1 in

IMPORTANT SAFETY INFORMATION

Do not use DORMOSEDAN GEL in horses with pre-existing atrioventricular (AV) or sinoatrial (SA) block, with severe coronary insufficiency, cerebrovascular disease, respiratory disease, or chronic renal failure. Do not use in anesthetized or sedated horses, or in conditions of shock, severe debilitation or stress due to extreme heat, cold, fatigue or high altitude. Handle gel-dosing syringes with caution to avoid direct exposure to skin, eyes or mouth. See full Prescribing Information attached or at DormGel.com/PI.
