ON POINT WITH CYTOPOINT®
WHAT YOU NEED TO KNOW

What to expect after your dog's first treatment

Your dog just received their first Cytopoint injection—great choice!
Here's what you need to know about your dog's journey to allergic itch relief:

- Relief typically begins within 24 hours[1]
- One injection provides 4 to 8 weeks of relief[1]
- **Some dogs benefit from a second or third treatment for maximum itch relief[2]**

Getting On Point: Common questions after your dog's first treatment

Q: "When will I notice a difference?"

A: Your dog should start feeling better within the first day. You might notice:

- Less scratching and licking
- Better sleep patterns
- More playful behavior
- Improved mood

Q: "What if I don't see changes right away?"

A: Each dog responds differently. Some dogs need a second or third treatment to get maximum relief.

Q: "Can my dog return to normal activities?"

A: Yes! Your dog can:

- Play and exercise as usual
- Go to the dog park
- Take baths or swim
- Enjoy their regular routine

Q: "Will my dog experience any side effects?"

A: A clinical study showed dogs receiving Cytopoint had no more side effects than dogs receiving placebo (injections without medication).[3] And since Cytopoint is not a chemical-based treatment, it does not put pressure on the liver and kidneys.

Q: "Can my dog continue to take other medications?"

A: Yes! Cytopoint can be used in dogs taking other medications.[3] Always inform your vet about any medications your dog is taking.

CYTOPOINT®

Staying On Point: Keys to success

Keep your dog's treatment on track:

Schedule your next appointment right away if you haven't already done so **(pro tip: do this before leaving the clinic!)**

Repeat administration every 4 to 8 weeks as needed

If you notice your dog is frequently **scratching, licking, or chewing,** you should call your veterinarian. Your vet may want to adjust your dog's Cytopoint injection schedule.

Ways to keep your dog's treatment On Point:

Quickly set up appointment reminders

Get **The Pack app**

Monitor symptoms with the **Cytopoint Itch Tracker** included in this kit

Managing itch year-round

Some dogs have year-round disease and may need continuous treatment with Cytopoint, whereas other dogs may only need Cytopoint seasonally. You and your veterinarian should decide together what is best for your dog's specific situation.

Have other questions?

Visit **Cytopoint4Dogs.com** or speak with your veterinary team to ensure your dog gets the most from Cytopoint treatment.

INDICATIONS:
Cytopoint has been shown to be effective for the treatment of dogs against allergic dermatitis and atopic dermatitis.
