

Comprehensive diagnostic support for poultry health insights

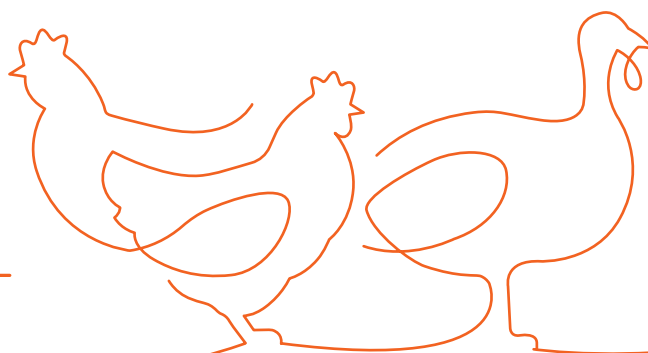

With continually evolving disease challenges and the need to validate vaccine handling and administration, diagnostic services from Zoetis are designed to help support your vaccination success.

By choosing to work with Zoetis, you choose reliability backed by a dedicated team with decades of experience in the poultry industry to help support each flock's unique health needs.

Zoetis Diagnostic Services are accompanied by a comprehensive suite of Poulvac® vaccines and support designed to help you improve flock health and achieve your goals.

Diagnostic services available from Zoetis:

- ✓ Hatchery environmental surveys with bacterial and fungal risk assessment
- ✓ Field surveillance for multiple strains and variants:
 - Avian Metapneumovirus (aMPV)
 - Infectious Laryngotracheitis (ILT)
 - Infectious bronchitis
 - Infectious bursal disease
- ✓ Vaccine take analysis for:
 - Avian Metapneumovirus (aMPV)
 - Infectious bronchitis
 - Laryngotracheitis
 - Marek's disease
 - Newcastle disease
 - *Salmonella*

zoetis

Support for robust chick development

The team from Zoetis collaborates with hatcheries to take a holistic view, assessing microbial risks through environmental and bacterial surveys and provides consultation and support to help enable effective vaccine application. Training and consultation are available for recommended vaccine handling and mixing protocols, including *in ovo* vaccination with Embrex® BioDevices and spray cabinet application with day-of-age vaccines.

Insight on flock health and vaccine program success

Posting sessions offer insights into flock health and can indicate opportunities for improvement. To help support evolving disease pressures and emerging disease strains, Zoetis provides surveillance support for infectious bronchitis and infectious bursal disease.

Vaccine efficacy can be impacted by human error, so Zoetis offers vaccine take analysis to monitor and help evaluate vaccine administration practices.

Experts you have confidence in for analysis and support

The Zoetis team, with practical poultry industry experience, provides support at every stage of poultry production, including posting sessions and sample collection in the field to help assess bird health and support vaccine programs. After sampling and analysis, they offer consultation to help turn detailed lab reports into actionable steps.

Sampling Instructions

Scan the appropriate QR code to access diagnostic sampling instructions for infectious bronchitis, infectious bursal disease and Marek's disease.
