Antiparasitic

Dectomax Pour-On solution is developed specifically for use in cattle. It is a concentrate containing doramectin, which works by modulating chloride ion channels in the nervous system of the host and muscle cells of parasites. This action produces a lethal effect on the parasites without affecting the host. Doramectin is highly effective against gastrointestinal roundworms, grubs, biting and sucking lice, and horn flies. It is also effective against cattle ticks, warbles, and mange mites. This product is used as part of an integrated control program and should be used in conjunction with appropriate diagnostic testing.

DOSAGE:

- The dosage for cattle is 1 mL per 22 lb (10 kg) of body weight. Each mL contains 5 mg of doramectin.
- Dose 3 times the recommended dose of Dectomax Inject for organogenesis, implantation, and through gestation, (a), a withdrawal period of 28 days; and (b) secure the dose with the adjuster screw locknut.

ADMINISTRATION:

- Dectomax Pour-On solution should be used under the direction of a veterinarian or an entomologist.
- Ensure each animal receives a complete stomach evacuation before dosing to maximize efficacy.
- Dosing should be administered between the withers and tailhead.
- The first common mode of action is to modulate chloride ion channels in the nervous system of the host and muscle cells in arthropods and nematodes, leading to death.
- Studies have demonstrated the safety margin of doramectin in cattle. In USA trials, no toxic signs were seen in cattle given the recommended dose.
- Dectomax Pour-On solution is highly effective against cattle ticks, warbles, and mange mites.
- Use with caution in lambs and sheep due to the potential for severe reactions.
- The product is not for human use.

PRECAUTIONS:

- Consult a veterinarian or an entomologist if the product is not effective or if resistance is suspected.
- Do not treat animals with mange mites.
- Do not use on animals with head tilt, ataxia, or paralysis.
- Do not treat pregnant females at the end of the heel fly season with Dectomax Pour-On solution.

OTHER WARNINGS:

- Do not contaminate ponds for at least 6 hours after treatment.
- Do not contaminate food or water sources.
- Do not contaminate food or water sources.
- Do not contaminate food or water sources.
- Do not contaminate food or water sources.
- Do not contaminate food or water sources.
