

Client Information Sheet

Solensia® (frunevetmab injection)

You should read this information before starting your cat on SOLENSIA and review it with your veterinarian each time your cat receives an injection as there may be new information. This Client Information Sheet provides a summary and does not take the place of the instructions from your veterinarian. Talk to your veterinarian if you do not understand any of this information or you want more information about SOLENSIA.

What is SOLENSIA?

SOLENSIA is a drug used for the control of pain associated with osteoarthritis (arthritis) in cats. It is a commercially produced monoclonal antibody (a protein) which binds to another protein in your cat called nerve growth factor (NGF). NGF can be elevated in the joints of cats with arthritis and is associated with the transmission of the pain sensation to the brain. When SOLENSIA binds to NGF, it reduces the effect of NGF.

How is SOLENSIA given to my cat?

SOLENSIA is given as a once-a-month subcutaneous injection (under the skin) by your veterinarian.

What can I expect from my cat's treatment with SOLENSIA?

- While SOLENSIA does not treat, slow, or reverse the progression of arthritis, SOLENSIA can alleviate arthritis pain for 1-month post-injection.
- Discuss your cat's response to SOLENSIA with your veterinarian prior to each injection to determine if SOLENSIA is working for your cat and to decide whether your cat should continue to receive SOLENSIA.

What should I discuss with my veterinarian before my cat receives each injection of SOLENSIA?

Talk with your veterinarian about:

- The risks and benefits of using SOLENSIA.
- Your cat's previous or current medical problems, especially:
 - skin problems
 - balance problems or trouble walking or jumping
 - weakness
 - seizures
 - kidney disease
 - pancreatic disease
 - previous allergic reaction to SOLENSIA
- All medications your cat is taking, including prescription drugs, over the counter drugs, heartworm preventatives, flea and tick medications, and vitamins and supplements, including herbal medications or homeopathic products.
- Any previous, or current, monoclonal antibody therapy your cat has received.

What cats should not be given SOLENSIA?

Your cat should not be given SOLENSIA:

- If your cat is less than 7 months of age or weighs less than 5.5 pounds.
- If you have plans to breed your cat or they are pregnant or nursing.

- If your cat has ever had a severe allergic reaction after receiving SOLENSIA.
- If your cat has new health problems or their health has recently changed, because further tests may be recommended prior to starting or continuing SOLENSIA.

What are some possible side effects of SOLENSIA?

The following side effects have been seen in cats given SOLENSIA:

- Skin problems (such as itchiness of the face and body, redness, irritation, scabs, hair loss)
- Decreased or loss of appetite
- Lethargy
- Weight loss
- Vomiting or diarrhea
- Balance problems or trouble walking or jumping
- Seizures
- Paralysis
- Weakness
- Behavioral changes (such as excessive vocalization and hiding)
- Drinking or urinating more
- Signs of severe allergic reaction (anaphylaxis) such as pale gums, collapse, difficulty breathing, and panting.

These are not all the possible side effects of SOLENSIA. Serious side effects can occur, with or without warning, and in some situations may result in death.

Contact your veterinarian if you observe any of these changes in your cat or your cat has any other changes that concern you.

This Client Information Sheet provides a summary of information about SOLENSIA. If you have any questions or concerns about SOLENSIA, talk to your veterinarian.

To report side effects call Zoetis at 1-888-963-8471. For additional information about reporting side effects, contact FDA at 1-888-FDA-VETS or www.fda.gov/reportanimalae.

Approved by FDA under NADA #141-546
