

MAXIMIZE TREATMENT SUCCESS WITH A CYTOPLAN

Guide your clients through Cytopoint® treatment and ensure compliance

PET OWNERS ARE

7x

more likely to follow a clear treatment plan than an ambiguous recommendation¹

Progress exams help determine when dogs have achieved treatment success

Schedule a progress exam with the pet owner 4 weeks after the first Cytopoint injection

If the dog is a treatment success, determine the appropriate interval for follow-up injections

If the dog has a partial response, administer a second injection and schedule a second progress exam in 4 weeks

Administer Cytopoint every 4 to 8 weeks as needed to maintain treatment success²

Use the note section of your patient's Cytoplan for reminders and additional treatment recommendations

Indications: Cytopoint has been shown to be effective for the treatment of dogs against allergic dermatitis and atopic dermatitis.

CYTOPLAN FOR:

(patient's name)

Schedule a progress exam 4 weeks after the first Cytopoint® injection

Date of exam

Establish the appropriate injection interval to maintain your dog's allergic itch relief

Receive Cytopoint every

weeks

Get text and/or email reminders

- Sign up at zoetispetcare.com/reminders so your dog never misses an injection

Schedule an exam if you suspect a flare

- Flares are common in dogs with allergic dermatitis and are not a sign that your dog's treatment has stopped working
- Home remedies or over-the-counter treatments are unlikely to relieve itch
- Flares can be caused by skin and ear infections, fleas, house dust mites, pollen or food allergies

Call the practice with any questions about your dog's

CYTOPLAN

Indications: Cytopoint has been shown to be effective for the treatment of dogs against allergic dermatitis and atopic dermatitis.
