**Financial risk: up to $885 in an unvaccinated horse**

If your horse is around others, it could be at risk. That’s why it’s important to determine whether your horse is at risk and, if so, to vaccinate against EIV. Proper vaccination can help protect your horse and help protect you from financial loss.
The American Association of Equine Practitioners (AAEP) recommends that at-risk horses be vaccinated every six months. At-risk horses include those that are less than 6 years of age and those that are geriatric, as well as horses that may be frequently exposed to equine influenza virus (EIV) at shows, trail rides or other events.

For at-risk horses that are not vaccinated, the risk of contracting EIV can leap to 93.2%.** (See chart below.)

### Vaccination vs. no vaccination**

**Recommended by the American Association of Equine Practitioners (AAEP). At-risk horses include those that are less than 6 years of age and those that are geriatric, as well as horses that may be frequently exposed to equine influenza virus (EIV) at shows, trail rides or other events.**

### GAIN PEACE OF MIND WITH A GUARANTEE.

The FLUVAC INNOVATOR vaccines are part of the Zoetis Equine Immunization Support Guarantee. This guarantee provides up to $5,000 for reasonable diagnostic and treatment costs if a horse properly vaccinated by a veterinarian contracts the corresponding equine disease.
