The long-acting power of SYNOVEX® ONE GRASS implants from Zoetis delivers up to 200 days of improved gain in pasture steers and heifers. A new study demonstrates a 20-pound advantage/head on grazing steers implanted with SYNOVEX ONE GRASS when compared with cattle receiving Revalor®-G and Encore® on pasture 200 days.

The extended performance of SYNOVEX ONE GRASS allows you to prolong grazing gains while grass is still available to utilize after 90 days. Selecting SYNOVEX ONE GRASS provides stocker operations the marketing flexibility other implants can’t.

**ADVANTAGE OF SYNOVEX® ONE GRASS VS. REVALOR®-G AND ENCORE®**

2.22 lb./day average daily gain for 200 days, compared with Revalor-G or Encore (2.11 lb./day)  

\[ P = 0.0027 \]

$24 advantage compared with cattle implanted with Revalor-G or Encore,* when considering added weight gain and implant costs
SELECT A LONG-DURATION IMPLANT THAT IS TAILORED TO YOUR STOCKER OPERATION.

SYNOVEX® ONE GRASS is made with stocker producers in mind. The implant’s patented polymer, pore-forming barrier delivers performance enhancement, marketing and operational flexibility and a proven return on investment for up to 200 days.

SYNOVEX ONE GRASS can be used with the following applicators:

• The SX10 Precision Applicator, which helps prevent bunched, crushed and dropped implants
• The durable metal Revolver applicator is also compatible with SYNOVEX ONE GRASS with the SYNOVEX ONE adapter kit

Zoetis is committed to helping optimize the health and productivity of cattle operations. To learn more about our comprehensive line of SYNOVEX implants and how you can find more pounds in your pasture, contact your Zoetis representative or visit GrowWithSYNOVEX.com.

Do not use SYNOVEX products in veal calves. Refer to label for complete directions for use, precautions, and warnings.
