Why Do I See Rapid Resolution With CONVENIA® (cefovecin sodium)?

A hypothesis based on learnings from human and veterinary medicine.

**Cytokines** protein messengers

- Cause itch in atopic dermatitis
- Cause inflammation in skin infections

---

**CONVENIA works fast**

**30 mins** in the tissue

**4 hrs**

**CONVENIA vs Oral Medications**

When antibiotic concentration drops below the MIC90, bacteria are no longer inhibited and the effect on the inflammatory process is questionable.

---

**CONVENIA is unrelenting for 14 days**

**Hits Hard. Hits Fast.**

Within the first 24 hours, CONVENIA reaches free concentrations of >14x the MIC90 of *Staph. intermedius* in the tissue.

**CONVENIA vs Oral Medications**

When antibiotic concentration drops below the MIC90, bacteria are no longer inhibited and the effect on the inflammatory process is questionable.

---

**IMPORTANT SAFETY INFORMATION:** People with known hypersensitivity to penicillin or cephalosporins should avoid exposure to CONVENIA. Do not use in dogs or cats with a history of allergic reactions to penicillins or cephalosporins. Side effects for both dogs and cats include vomiting, diarrhea, decreased appetite/anorexia and lethargy. See full Prescribing Information, attached.

CONVENIA is indicated for the treatment of skin infections (secondary superficial pyoderma, abscesses and wounds) in dogs caused by susceptible strains of *Staphylococcus intermedius* and *Streptococcus canis* (Group G). CONVENIA is indicated for the treatment of skin infections (wounds and abscesses) in cats caused by susceptible strains of *Pasteurella multocida*.

One and done.

In a U.S. efficacy study, 86% of dogs needed only one injection to resolve their skin infection.¹

Recommend CONVENIA® (cefovecin sodium) for first-time resolution of bacterial skin infections.
