

**BEFORE TREATMENT**

**AFTER CYTOPOINT**

**HARLEY, MALE, AGE 14 YEARS, YORKSHIRE TERRIER MIX**

Veterinarian: Dr Liz Hardesty, Murrayhill Veterinary Hospital, Beaverton, OR

**CYTOPOINT® is an excellent choice for owners who are looking for a long-lasting alternative to daily pilling treatments<sup>1</sup>**

**Harley's temperament and his owner's schedule made daily pilling treatments challenging**

Harley had received regular grooming at Dr Hardesty's clinic for a number of years. The groomer began consistently noticing skin infections, ear infections and hot spots. Dr Hardesty treated Harley with antibiotics and prescribed daily oral tablets for the underlying itch. Harley's condition improved, and he had fewer secondary infections; however, due to Harley's feisty temperament and the schedule issues resulting from having young children, his owner was having difficulty with daily pilling.

**Treatment decision**

When CYTOPOINT became available, Harley's owner was very enthusiastic about trying it, so Dr Hardesty gave Harley the injection to control his chronic itch.

**CYTOPOINT treatment result**

At the 30-day recheck, both Dr Hardesty and Harley's owner were very pleased with Harley's progress. Harley's itching was controlled, and his constant paw biting had stopped. His owner reported that he was more able to "be himself." Dr Hardesty noted that, despite his age, Harley seemed to be more lively and energetic than he had been now that his chronic itch was no longer bothering him.

**"HARLEY'S OWNER SEEMED VERY HAPPY AT THE ONE-MONTH RECHECK. IT SEEMED LIKE WE HAD TAKEN A WEIGHT OFF OF HER SHOULDERS IN TERMS OF HAVING TO ADMINISTER MEDICATION AT HOME. I THINK IT DID IMPROVE THEIR HUMAN-ANIMAL BOND. I'M SURE AT HOME SHE IS ABLE TO SPEND SOME QUALITY TIME WITH HIM...IN WAYS OTHER THAN STRUGGLING WITH MEDICATION."**

– Dr Liz Hardesty, Harley's DVM

**Indications:** CYTOPOINT has been shown to be effective for the treatment of dogs against allergic dermatitis and atopic dermatitis.
