Target: Detection of Parvovirus Antigen in feces

Situation of use: Sick dog: confirmation of Parvovirus infection

Sample: Feces

Performance:
- **Sensitivity**: 86.3% (95% CI: 76.6%-92.4%)¹
- **Specificity**: 96.1% (95% CI: 89.2%-98.7%)¹
  
  N = 150 samples
  
  Reference test—hemagglutination (HA)

Presentation: Box of 5 test kits / No refrigeration necessary

**GENERAL INFORMATION**

**TEST KIT INSTRUCTIONS**

1. Dispense buffer into tube up to graduation mark.
2. Collect feces swab and insert it into the tube. Tap to mix.
3. Break the top of the swab at the blue line.
4. Invert and use the device to dispense 5 drops of sample.
SIMPLE-TO-INTERPRET RESULTS*

Result reading and interpretation: 10 minutes later

VALID TEST

Positive result

Negative result

INVALID TEST

Test failure

Test failure

*All test results should be interpreted in light of the clinical context (pet history and physical examination) and the knowledge of the disease pathogenesis.

USEFUL TIPS

• WITNESS® Parvo detects strains 2a, 2b, and 2c.¹²
• WITNESS® Parvo is unlikely to yield false positive results between 3 and 28 days following administration of a modified-live canine parvovirus vaccine.³
• CPV-2 is seldom detectable after 5-7 days of clinical illness (negative test).⁴
